

ORL: project and current capabilities

Orl Coin (ORL) is an early-stage, fixed-supply community token on BNB Smart Chain. Its stated aim is to build a transparent ORL community around verifiable token transfers and accessible wallet-based trading. The deployed ERC-20-compatible contract has 200,000 ORL, 18 decimals and no transfer tax, external mint, owner, pause or blacklist function. ORL currently trades through a PancakeSwap V3 ORL/WBNB pool; the official website offers MetaMask connection and direct BNB purchases. No separate application utility, staking, governance or reward system is implemented. The project is unincorporated and led by Ahmet Dursun Çoban, who self-identifies as CEO/project lead. Source verification is not an independent security audit. Creator concentration and low liquidity remain material risks.

Identity and organization

Project: Orl Coin (ORL).

Network: BNB Smart Chain mainnet, chain ID 56.

Project lead: Ahmet Dursun Çoban, self-designated CEO as provided by the applicant.

Organization: unincorporated project; no registered company.

Other team biographies and legal jurisdiction: not supplied.

BscScan verified source

DEX Screener ORL/WBNB pair

Instagram displayed 329 followers and 3 posts when inspected. These are platform-display observations; authenticity, engagement and unique-user adoption have not been independently verified. Official X/Twitter and Telegram accounts have not been established.

Verified token implementation

Total and maximum supply: 200,000 ORL. Decimals: 18. Transfer tax: 0%. All tokens were minted once to the initial holder. The original Remix Standard JSON compiler input matches deployed runtime and creation code. Published BscScan source is verified; this is not an audit.

Contract address:
 0x1A6e22C5616491e673c3BDf6BFB7E5dAb08455a7
 Solidity 0.8.30 / optimizer 200 / EVM Shanghai

```
// SPDX-License-Identifier: MIT
pragma solidity 0.8.30;
import {ERC20} from
  "@openzeppelin/contracts@5.6.1/token/ERC20/ERC20.sol";
contract Or1Coin is ERC20 {
  error InvalidWholeTokenSupply();
  constructor(address initialHolder, uint256 wholeTokenSupply)
    ERC20("Or1 Coin", "ORL")
  {
    if (wholeTokenSupply == 0) revert InvalidWholeTokenSupply();
    _mint(initialHolder, wholeTokenSupply * 10 ** uint256(decimals()));
  }
}
```

Comments are omitted and the import is wrapped for page layout. Exact source, all dependency sources in Standard JSON and ABI are included in the application package. Do not redeploy the token to complete a listing.

Behavior and custody

Standard ERC-20 transfers and allowances are supported. There is no external mint, owner, pause, blacklist, transfer-tax or upgrade function. No staking or governance system is implemented. Wallet approvals remain controlled by users; existing allowances can carry separate risks.

Market, supply and risk disclosures

Existing trading access

Market: PancakeSwap V3, ORL/WBNB, pool fee 0.25%.

[Open the existing ORL market](#)

The official website provides visitor-controlled MetaMask connection and native BNB purchases through the official V3 router. The website blocks high price-impact purchases; this does not alter pool liquidity or restrict trades elsewhere.

Pool address:

0x9b60A701197b30F2996b7d8238B17E8b64E13cA4

DEX Screener snapshot: approximately \$8.91 pool liquidity; \$0.61 24-hour volume; 2 buys and 0 sells in that window. Figures are third-party estimates and change. There is no confirmed central-exchange listing.

Supply and concentration

At BSC block 126401515, the creator held 199227.690591242377556485 ORL, approximately 99.6138% of the 200,000 supply. All initial supply was minted to that wallet. No genuine redistribution or vesting has been implemented; the owner chose to retain the tokens.

Circulating supply has not been independently established. Total minted supply must not automatically be reported as circulating supply. LP control, team holdings and any future vesting must be disclosed explicitly.

Unresolved risks

Low liquidity and high creator concentration remain material risks. MetaMask and HashDit review requests were submitted; risk warnings have not been confirmed removed. No independent security audit or legal opinion has been obtained. This document makes no securities-law classification, profit guarantee, asset-backing claim or confirmed exchange-listing claim.

Başvuru durumu ve yapılacaklar

Bu dosya merkezi borsa başvurularında kullanılacak doğrulanmış teknik bilgiler ve taslak açıklamadır. Başvuru gönderildiği veya kabul alındığı anlamına gelmez. Her platform kendi güvenlik, piyasa ve hukuk değerlendirmesini yapar.

Hazırlanan resmî yollar

Binance, MEXC, Gate, OKX, KuCoin, Bybit, Bitget, Coinbase ve Kraken için resmî başvuru kaynakları incelendi. CoinGecko ve CoinMarketCap dosyaları ayrı fiyat takip başvurularıdır; alım satım borsası listelemesi değildir.

Tamamlanması gerekenler

1. Platformun istediği temsilci, ikamet/yargı alanı ve iletişim bilgileri.
2. Zorunlu sosyal hesaplar: incelenen MEXC formunda X hesabı gerekiyor.
3. Ekip geçmişi, bağımsız denetim ve hukuki görüş istendiğinde gerçek belgeler.
4. Dolaşımdaki arz ve dağılım yöntemi; gerçek bir vesting kararı varsa ayrı kullanıcı onayı.
5. Organik işlem geçmişi ve sürdürülebilir likidite.
6. Tam başvuru verileri ve sözleşme şartları için gönderim anında kullanıcı onayı.

Coinbase ve Bitget resmî sayfaları başvuru/listeleme ücretleri almadıklarını belirtir; ücretsiz başvuru değerlendirmeyi geçmek anlamına gelmez. Ücretli bir hizmet veya sözleşme, temsilcinin ayrıca değerlendirmesi ve onayı olmadan kabul edilmiş sayılmaz.
